## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8, 16-24, drawn to a multilayer electronic component having a multilayered product wherein all or part of the inductor electrodes are placed so as not to be sandwiched by the plurality of grounded electrodes, classified in class 333, subclass 24R.
  - II. Claims 9-15, drawn to a multilayer electronic component having a multilayered product wherein all or part of the inductor electrodes internal grounded electrodes are provided among the plurality of inductor electrodes, classified in class 333, subclass 140.
  - III. Claim 25, drawn to a communication apparatus having reception means having a low noise amplifier, filter and mixer and transmission means having a mixer, filter, and power amplifier, an antenna switch for switching between the reception and transmission means, classified in class 455, subclass 83.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such

as the inductor electrodes are placed so that they are not to be sandwiched by the plurality of grounded electrodes. See MPEP § 806.05(d).

4. Inventions III and I, II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions differ in operation by one being a communication apparatus including transceiving means and an antenna switching for switching between the receiving and transmitting means while the other is a specific component within one of the elements of the receiving/transmitting circuitry or antenna switch.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and search, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. A telephone call was made to Alan Ratner on 11/26/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lana N Le whose telephone number is (703) 308-5836. The examiner can normally be reached on M-F.
